## Branching stochastic processes as models of Covid-19 epidemic development : Lithuania - week 53

### Abstract

The results presented here are obtained using the methodology proposed in the paper <https://arxiv.org/abs/2004.14838> for the country Lithuania. The data comes from European Centre for Disease Prevention and Control available at <https://opendata.ecdc.europa.eu/covid19/casedistribution/csv>.

---

## **Table of Contents**

1. Observed Infection data .....	1
2. Estimating of the main parameter and some predictions .....	3

---

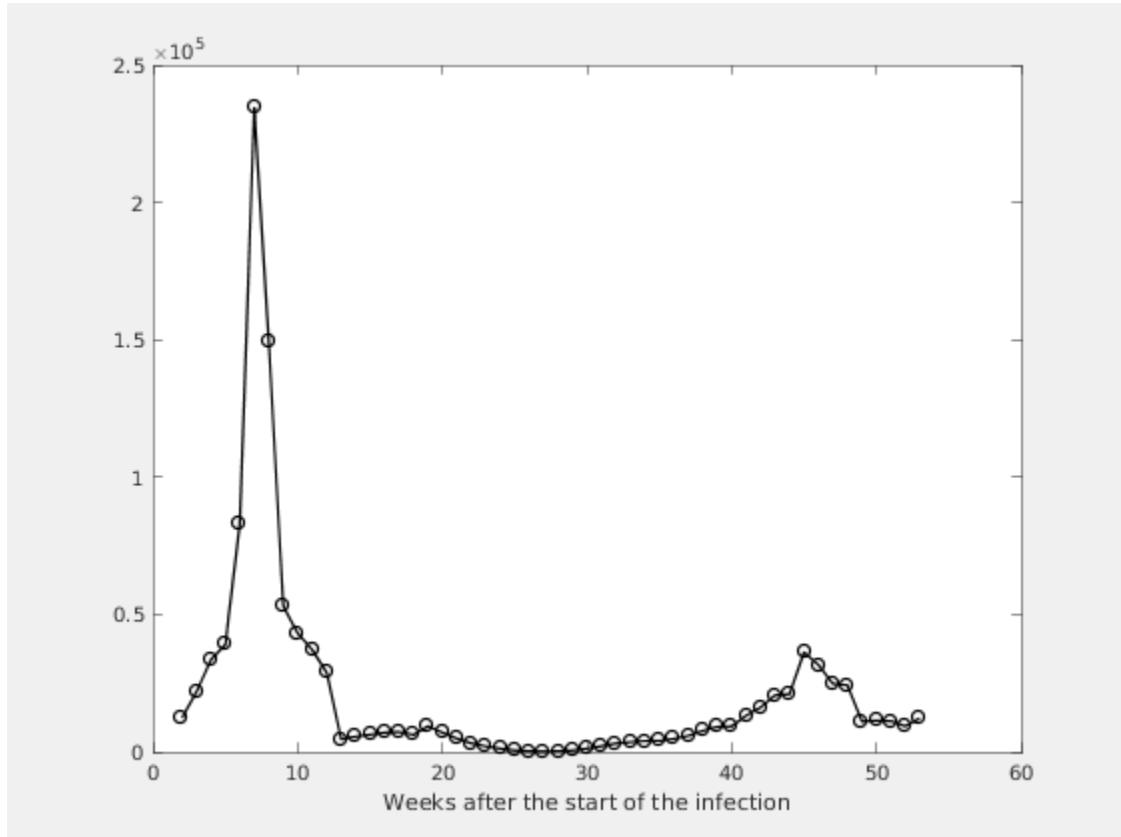

## List of Figures

1.1. Number of the weekly reported laboratory-confirmed cases .....	1
1.2. Number of the total registered cases .....	2
2.1. The Lotka-Nagaev and the Harris type estimator of the growth rate .....	3
2.2. Figure .....	4
2.3. Expected number of the nonregistered infected individuals without immigrati-	
on .....	5
2.4. Expected number of the nonregistered infected individuals with immigration .....	6

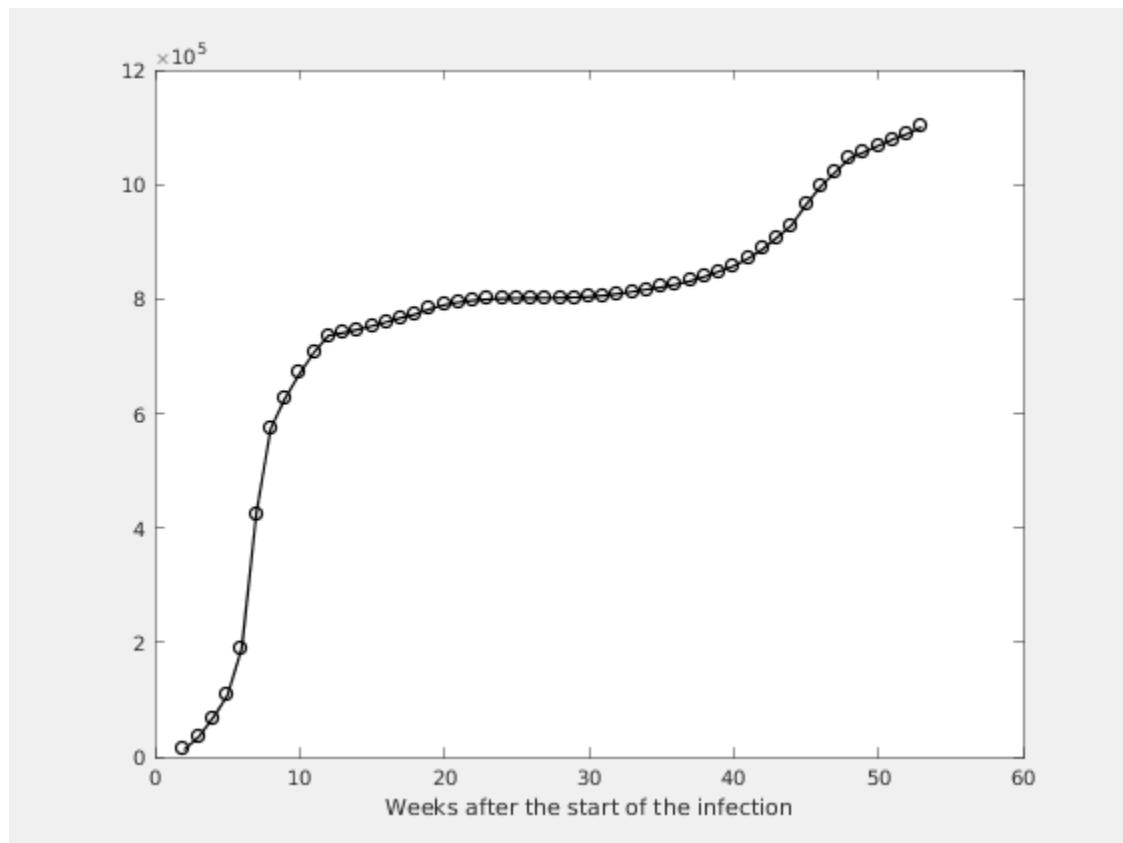

---

# Chapter 1. Observed Infection data

Figure 1.1. Number of the weekly reported laboratory-confirmed cases

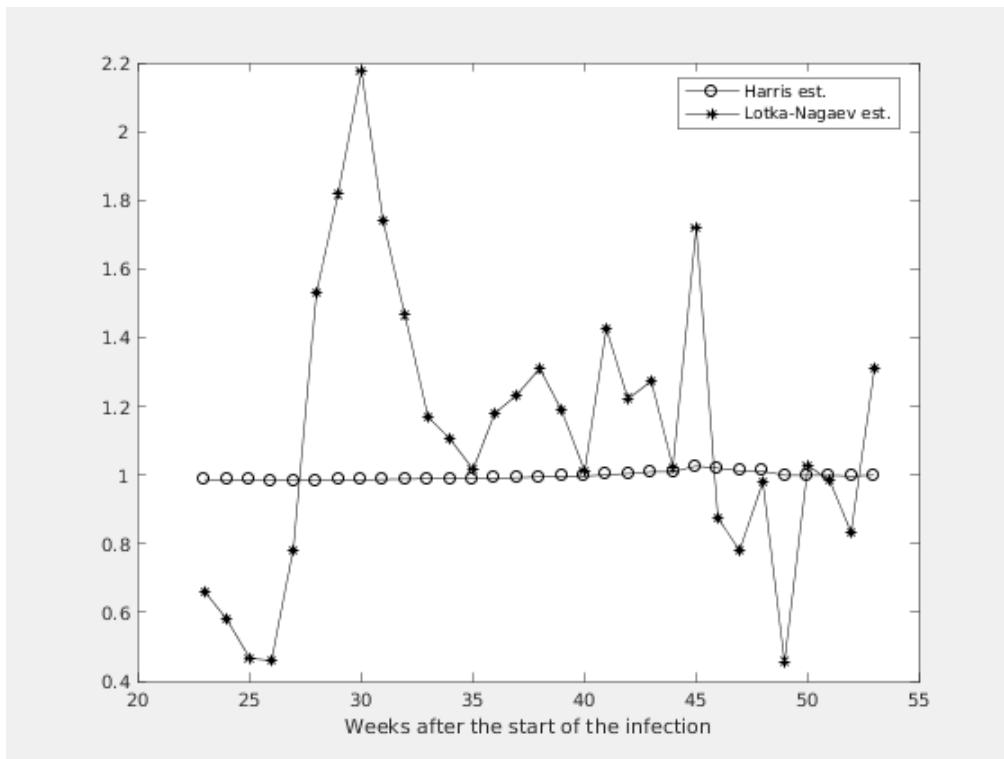

**Figure 1.2. Number of the total registered cases**

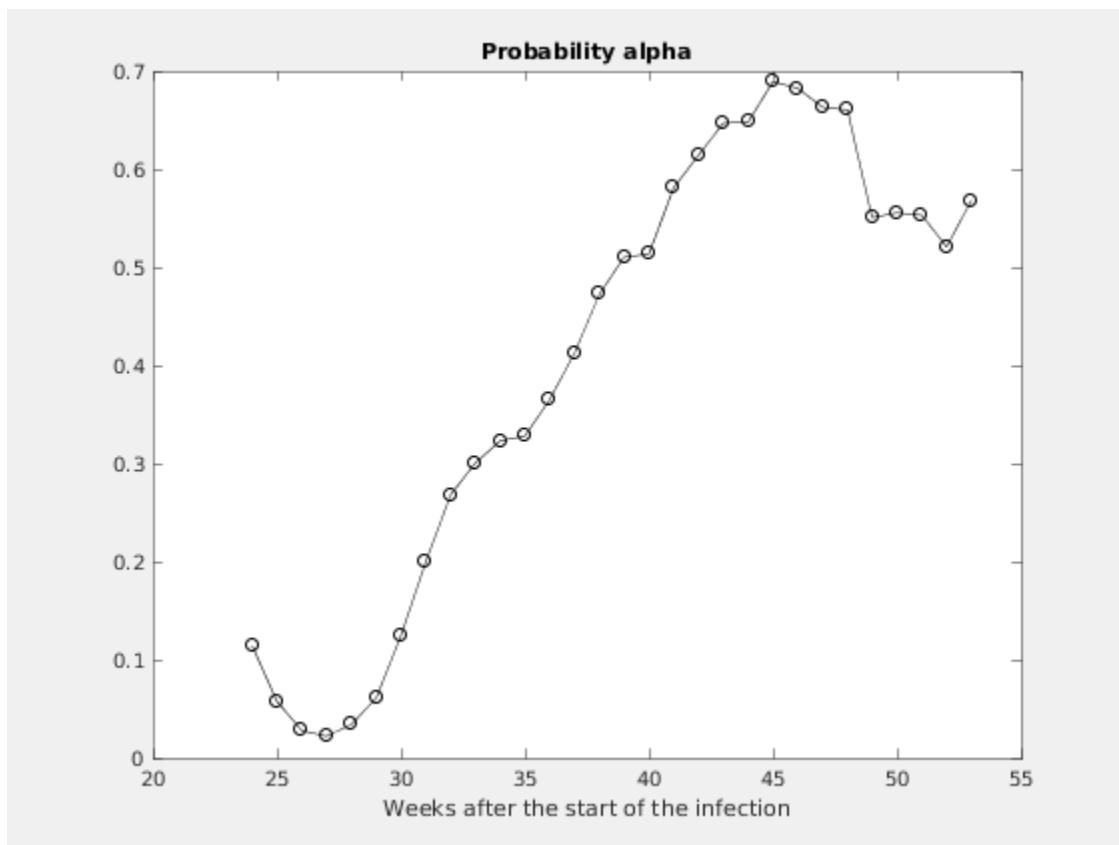

---

# Chapter 2. Estimating of the main parameter and some predictions

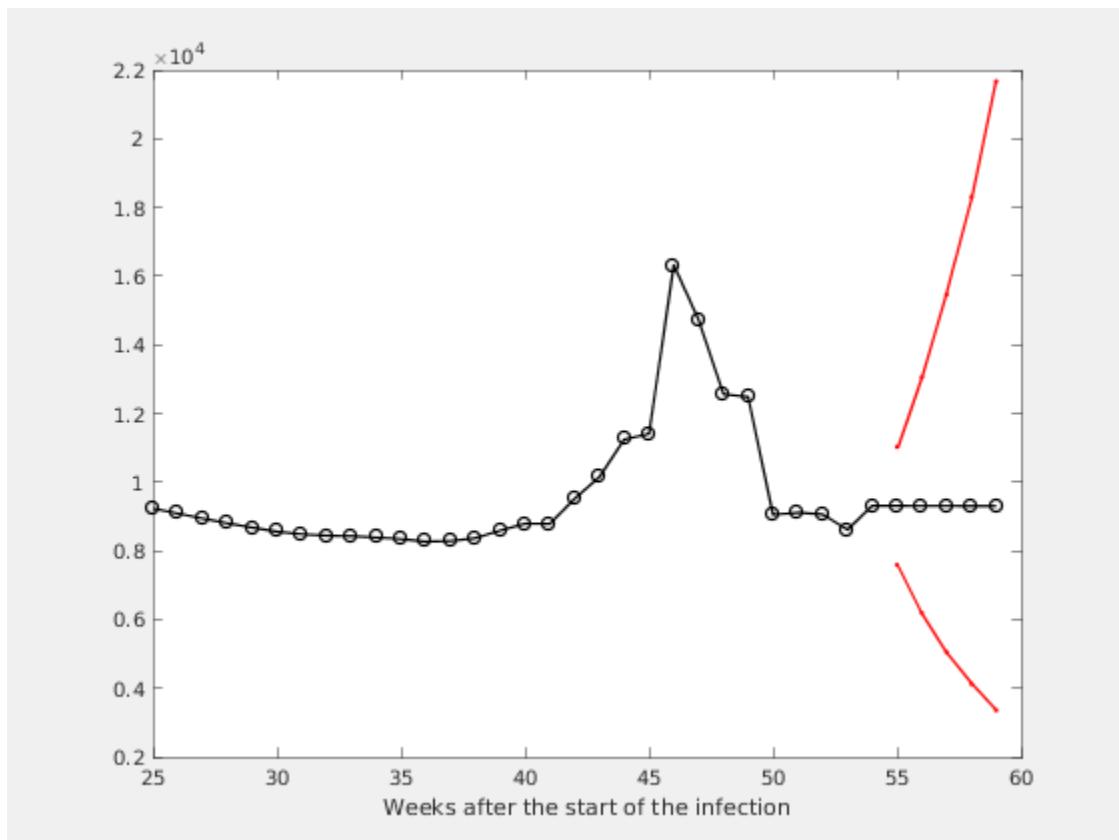

Figure 2.1. The Lotka-Nagaev and the Harris type estimator of the growth rate

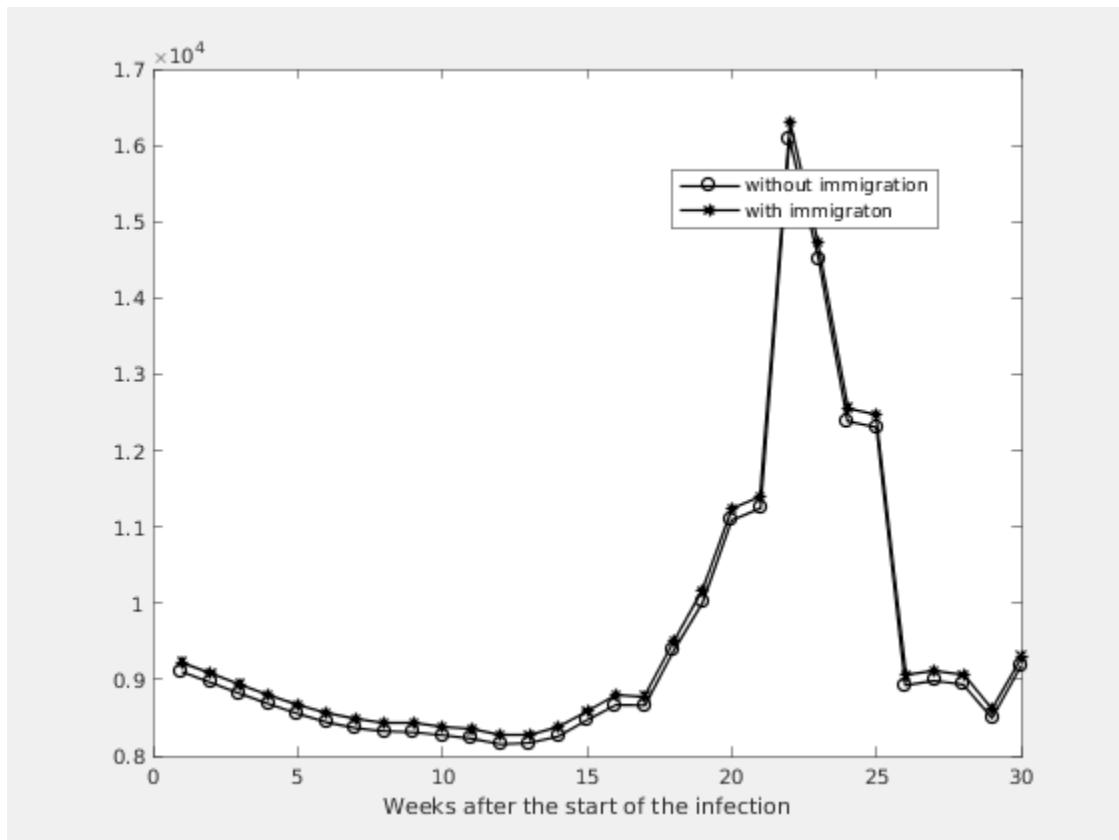

**Figure 2.2. Figure**

**Figure 2.3. Expected number of the nonregistered infected individuals without immigration**

**Figure 2.4. Expected number of the nonregistered infected individuals with immigration**

**Estimation of the model parameters.**
