## **Branching stochastic processes as models of Covid-19 epidemic development : Angola - 20201214**

### **Abstract**

The results presented here are obtained using the methodology proposed in the paper <https://arxiv.org/abs/2004.14838> for the country Angola. The data comes from European Centre for Disease Prevention and Control available at <https://opendata.ecdc.europa.eu/covid19/casedistribution/csv>.

---

## Table of Contents

|  |   |
|--|---|
| 1. Observed Infection data .....                               | 1 |
| 2. Estimating of the main parameter and some predictions ..... | 3 |

---

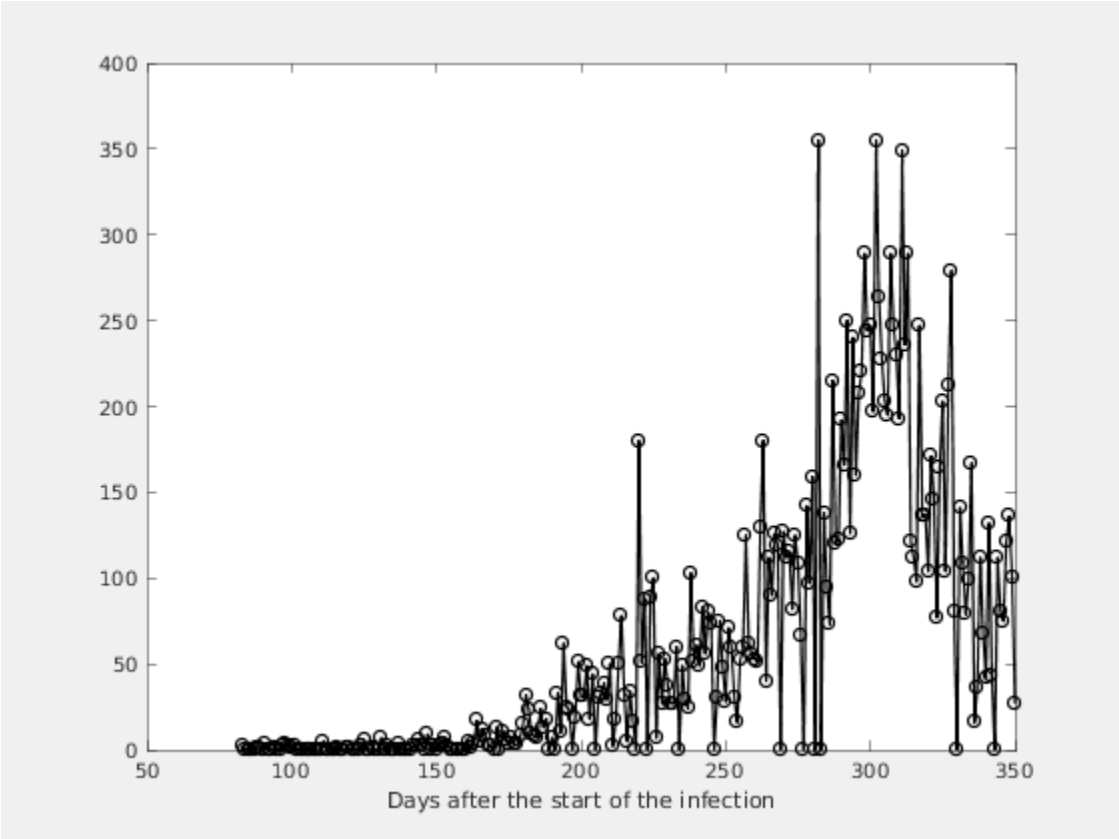

## List of Figures

|   |   |
|---|---|
| 1.1. Number of the daily reported laboratory-confirmed cases .....                            | 1 |
| 1.2. Number of the total registered cases .....   | 2 |
| 2.1. The Lotka-Nagaev and the Harris type estimator of the growth rate .....                  | 3 |
| 2.2. Figure .....   | 4 |
| 2.3. Expected number of the nonregistered infected individuals without immigra-<br>tion ..... | 5 |
| 2.4. Expected number of the nonregistered infected individuals with immigration .....         | 6 |

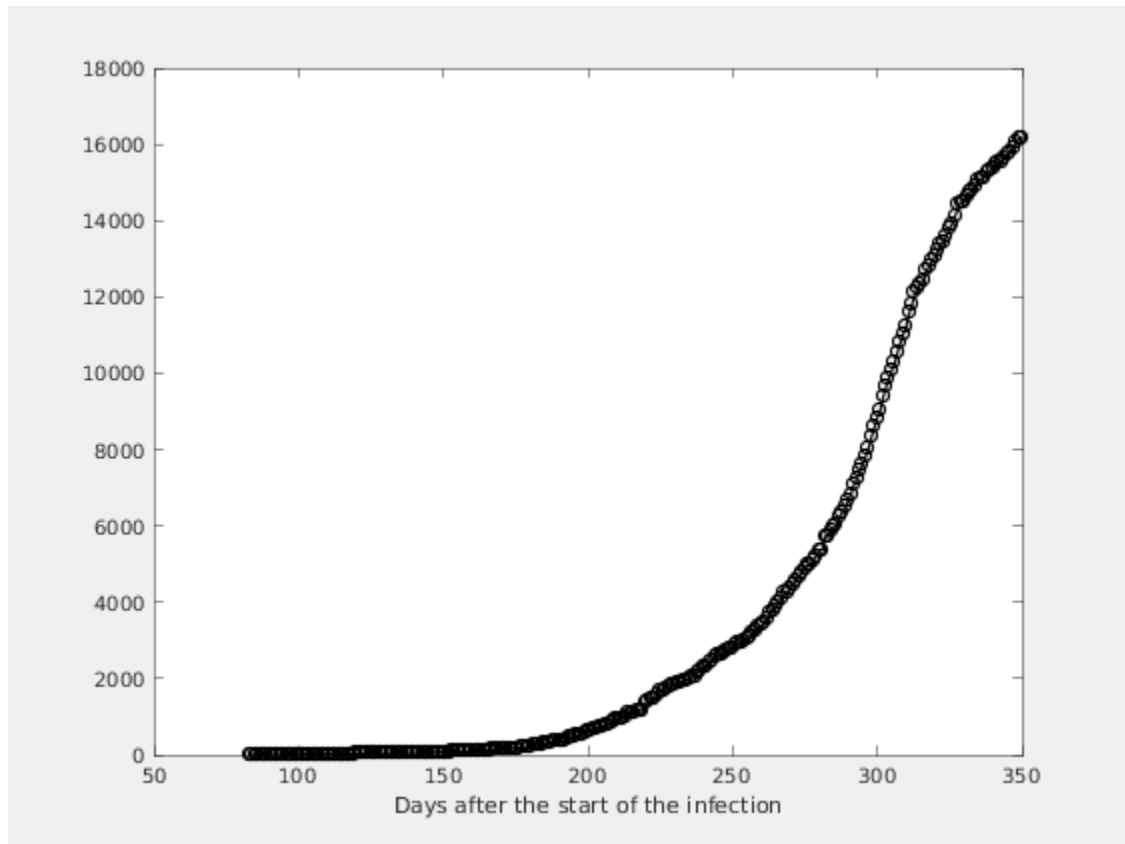

---

# Chapter 1. Observed Infection data

Figure 1.1. Number of the daily reported laboratory-confirmed cases

**Figure 1.2. Number of the total registered cases**

---

# Chapter 2. Estimating of the main parameter and some predictions

Figure 2.1. The Lotka-Nagaev and the Harris type estimator of the growth rate

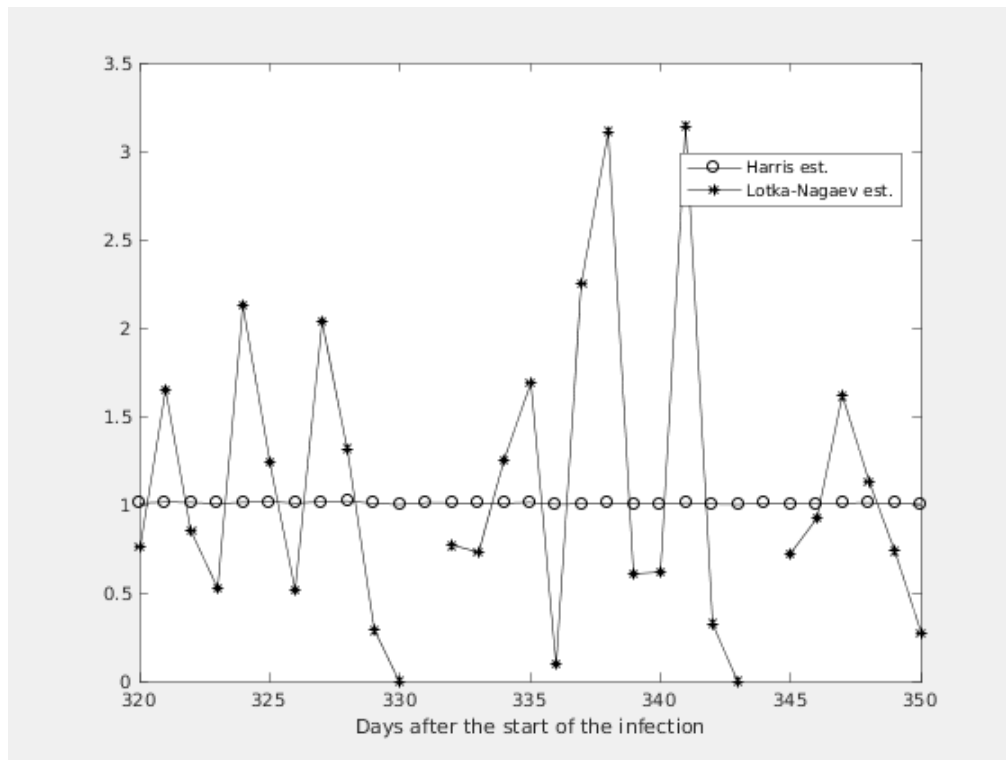

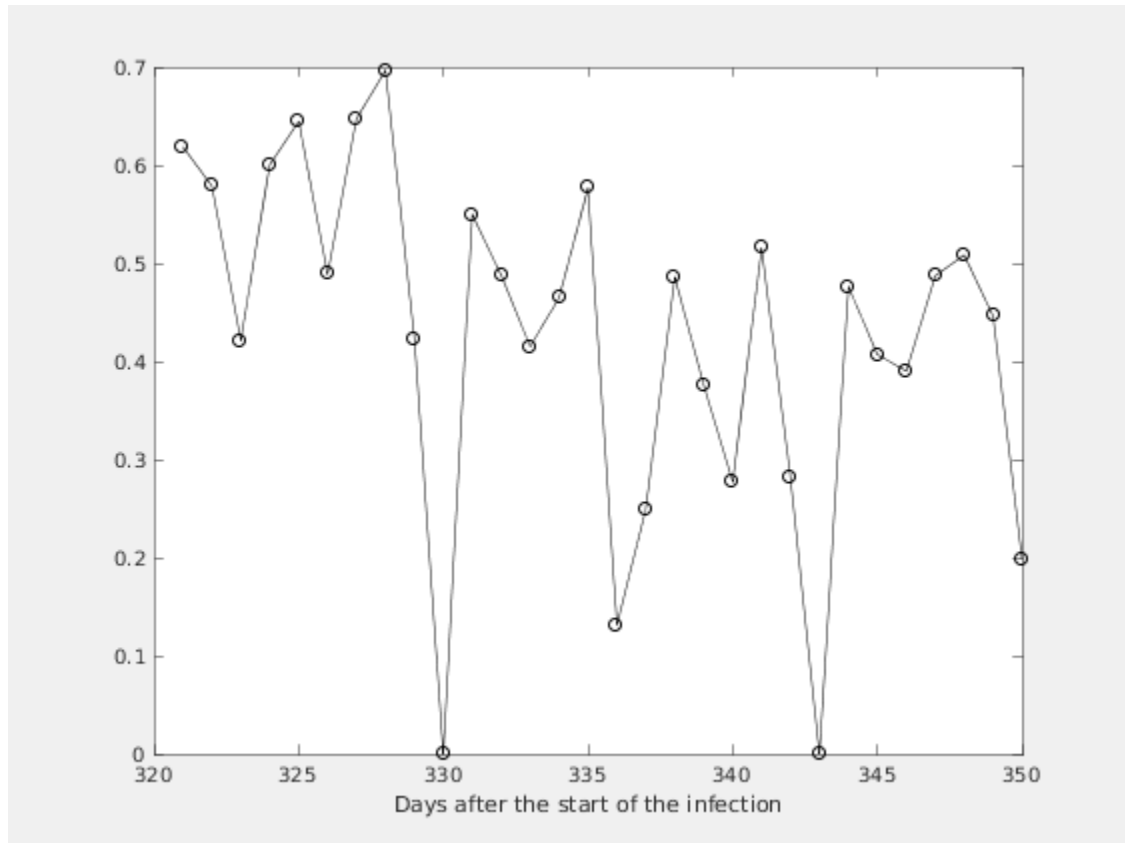

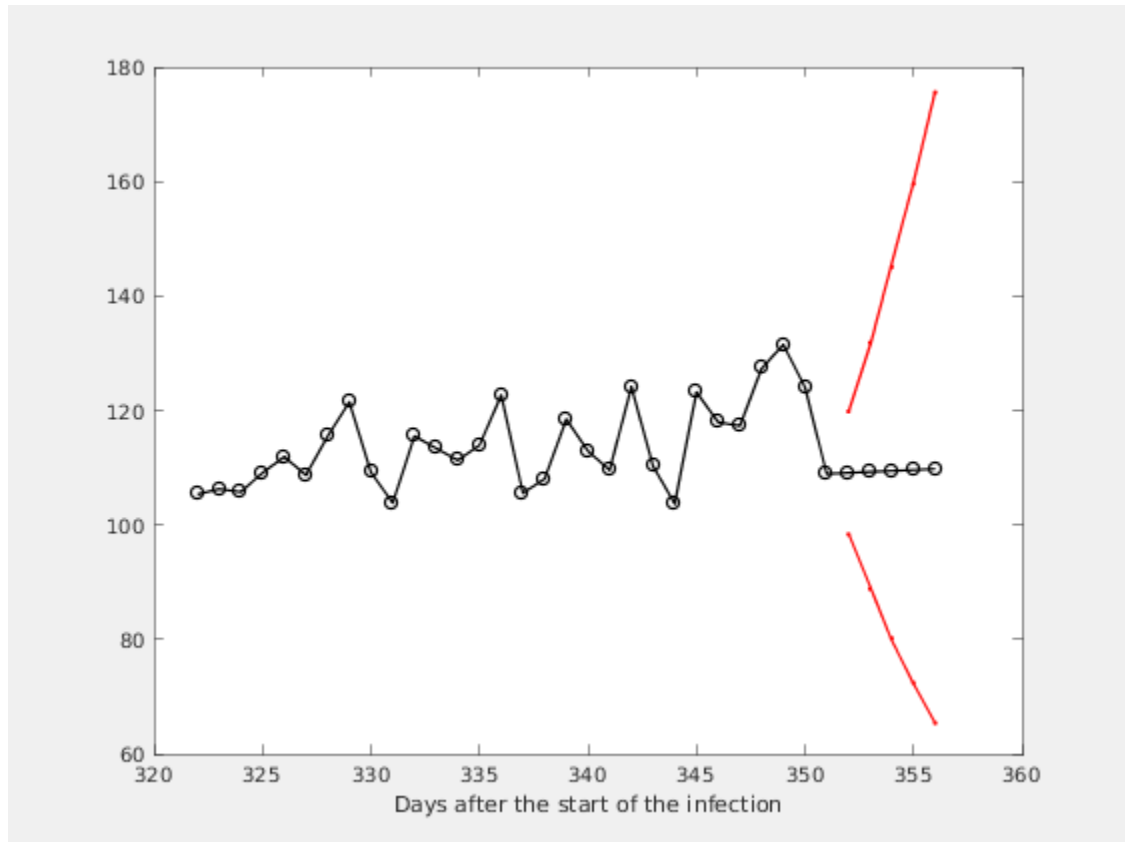

Figure 2.2. Figure

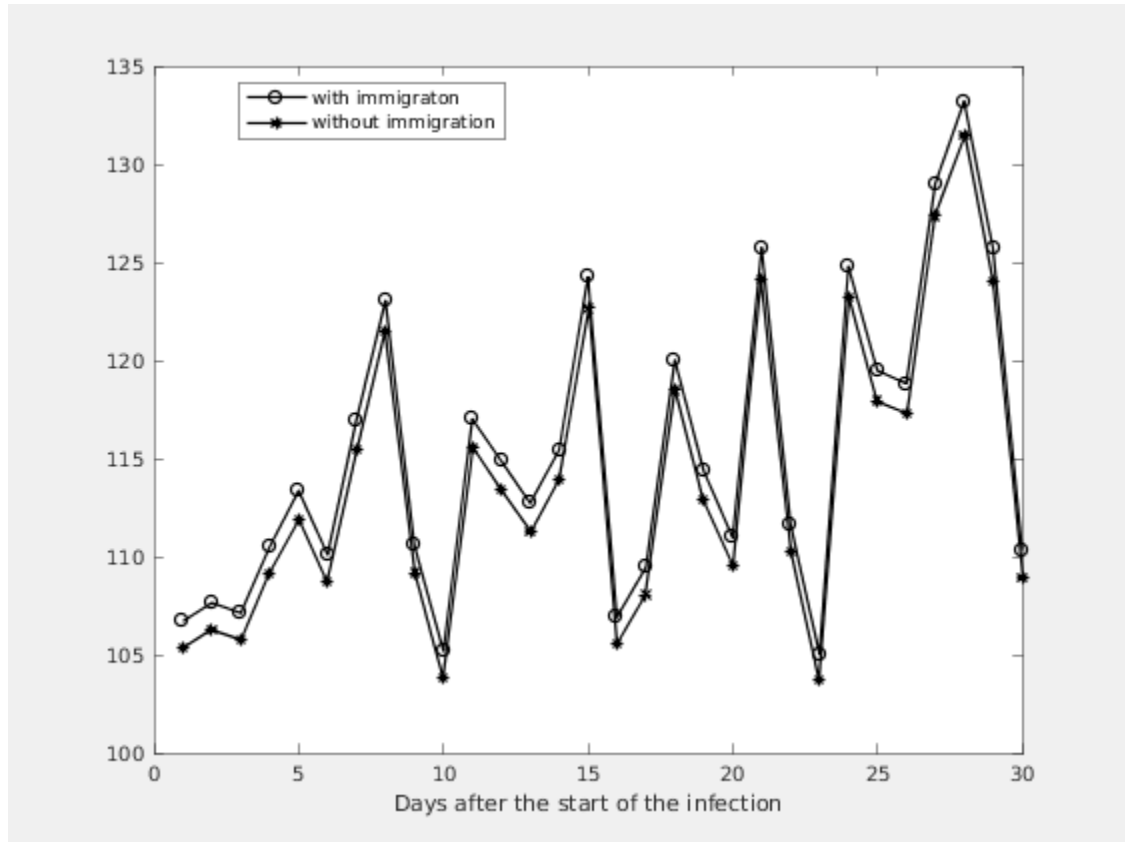

**Figure 2.3. Expected number of the nonregistered infected individuals without immigration**

**Figure 2.4. Expected number of the nonregistered infected individuals with immigration**

**Estimation of the model parameters.**
